Dig Defence® Animal Control Commercial Grade (DDAC) is a below ground fence system that protects commercial and residential structures against invasive wildlife and keeps pets from digging out of yards. This innovative exclusion product is easy to install and cost effectively addresses problems that previously mandated back-breaking hardware cloth buries or repeated trapping. DDAC is a simple, quick, trenchless, humane, drive-in permanent barrier underground that protects foundations, decks, sheds, electrical substations, zoos, barns and ranches against invasive wildlife and keeps pets from digging out of yards.

DDAC is made in the USA out of high quality 4 gauge galvanized steel. Each unit measures 15" H x 4' long and tines are spaced 1 ¼" apart. Once installed it protects properties from skunks, opossums, raccoons, porcupines, foxes, groundhogs and other animals that love to dig. DDAC is a great solution for all those open spaces currently accessed by unwanted wildlife visitors.

Installation Instructions: Clear the area of debris where DDAC will be installed to ensure a smooth installation. Using the DDAC Tool and a T-Post Driver drive the Dig Defence down into the soil eliminating the unwanted opening while also allowing enough of the fence to remain above ground (if needed) close to the permanent structure.
