

HAGz Bracket Instructions:

1. Attach Bracket to trap chain using a J-Hook (not included)
2. Mount Bracket.....
 - **Adjustable Depth:** Slide 3/8" rod through 3/8" Rod Hole until you reach desired depth and release bracket, the offset will cause the bracket to lock in place. Raise/lower as desired.
 - **Fixed Position:** Affix bracket at desired height with wire, screws, nails, etc.

Note: If mounting horizontally, orient the bracket so the appropriate slot is to the top to give the most jaw clearance.

3. Stabilizing a trap....
 - Set Trap and Insert the Traps Frame End into the appropriate slot.

Note: For best results, insert the Frame End just deep enough that its held in place when released (roughly 1/16" or to where it just breaks the brackets plane), so it will fall free with a catch.
