Phone: 877-684-7262

The SCI-354 combination Kritter-Cap® is a universal corner insert and can be used on 2 ¾”, 3”, 3 1/2 “, and 4” corner posts. It is easily sized by snipping or breaking off sections with side cutters or pliers.

<p>The SCI-354 Combination Kritter-Cap® is ready to use on 4” corner posts. The base filler tabs are used for filling voids where the plywood sheathing or insulation under the siding doesn’t come to a square corner and should be removed if not needed.</p>	
<p>For 3 ½” corner posts, cut or snip off the yellow legs and yellow base sections.</p> <p>For 3” corner posts, cut or snip off the green legs and green base sections.</p> <p>For 2 ¾” corner posts, remove the yellow and green sections and then snip off the small red base sections and inner tabs only.</p>	
<p>Start one leg of the Kritter-Cap® into the corner post fold. Insert the other leg and push the Kritter-Cap® up to the top of the foundation. If possible, use a small mirror to see that the Kritter-Cap® is closing the gap.</p>	
<p>This photo shows the gap created when a home builder does not overlap one end of the plywood sheathing to give a square corner. This gap can be ½ to 2 inches in length. These are the gaps that the Inside Filler Tabs on the SCI354 Corner Insert eliminate and prevent mice and insects from going up the inside of the corner post.</p>	
<p>Before installing, use a small mirror and check for gaps and voids that need to be filled. Tabs can usually be left on and the Corner Insert simply pushed up to the top of the foundation. If this is hard to do, break off tabs that are not needed before installation. Check with the mirror after installing the Corner Insert to be sure that the gaps have been closed.</p>	

**CAUTION: PROPERLY DISPOSE OF** all pieces and sections removed for installation. Do not leave trimmed pieces lying on the ground where they are accessible to small children and pets.
