WCS™ Multi-Catch Sparrow Trap

Trap ready for use

Trap with Clean out door open

The **WCS™ Multi Catch Sparrow** trap is easy to use as it comes ready to position, no setting necessary. This trap has 2 entry points and a release door. There are no moving parts to worry about. You should observe the flight path of the sparrow/s prior to positioning the trap. You want to make sure that the trap is placed where the birds are flying and gathering so that they are able to find it. Set it in these commonly approached areas and bait it with seed or bread crumbs. We suggest using millet as an attractant. You can also place a small bowl with water, which will also be attractive to the birds, especially if no other water source is available.

You need some patience as it could take time for the birds to find the seed and enter the trap. Once you start trapping birds, leave any nesting or other items brought in by the birds as this too will attract others.

Trap measures 16 x 12 x 8.
