The WCS Starling Catcher Instructions

The Starling Catcher is a 2-chamber bird trap that is specifically made for capturing starlings which are on, in, or around structures. Since starlings are cavity-nesting birds, the Starling Catcher gives them a perfect place to take up "residence". The Starling Catcher is attractively constructed of pine with piano hinges on each chamber door. Each wooden door is securely held closed by hook & eye hardware. A capture is easily identified by the bright orange dot on each spring-loaded trap door. When a starling enters the Starling Catcher they depress a "perch" which closes the door behind them.

To set the Starling Catcher begin by opening the chamber doors. One at a time, push each spring-loaded trap door in against the side of the chamber. Push the perch up until the catch is level with the bottom of the trap door. Allow the trap door to come to rest against the catch. You can now close and latch the chamber door. It's as simple as that!
